

General features

Our bundler machines can be used in the packaging of multipack products (such as rolls of kitchen-tissue paper, tray multipacks, products exiting heat forming machines, rockwool panels, etc.) or single, medium to large sized packs requiring packaging without necessarily being heat shrunk. They can be equipped, based on needs, with multiple channel diverters, stackers, label applicators, additional motorised belts inbound and outbound.

Specific features

Available in an automatic version in line or semi-automatic, it works with a flat or mono-folding film with possible addition of a splicer. Loading and creation of multipacks made to measure , adapted to various types of products. Maximum width of bag 3000 mm, height up to 600 mm. Maximum production speed: 25 packs/ minute. Upon request, the machine can be equipped with a special device to obtain the “pre-cut” (window) on the final pack.

Details

Cantilever and accessible from both sides. Reel holder with trolley for facilitated loading and replacement.

Fixed forming tube, designed based on the real product dimensions. Formats can be saved and programmed.

Motorised pusher with speed control for greater performance.

Robust and efficient, enclosed within an innovative, cantilever design accessible by the operator, with mechanics and electrical cabinet on view.

Based on speed and type of product, different feeding systems can be integrated, as the multichannel with diverter.

Mod.	Argon
Min. Bag dimension:	L 180 x W 330 x H 180 mm (optional L 180 x W 230 x H 180 mm)
Max. Bag dimension:	L 180 x W 330 x H 180 mm (optional L 180 x W 230 x H 180 mm)
Max Film width:	L 2350 (2450 mm optional) - (Wx2) + (Hx2) + 150 mm
Type of film:	FLAT PE
Power Supply:	400 V 50/60 hz 3 ph + N + G (upon request other voltages are available)
Standard Colour:	9007

ARGON

Bundler machine

ARGON

Bundler machine for multipacks with stacking without waste. The flat film reel, , thanks to the “tie” system, completely wraps the product sealing and closing the two flaps on top. The automated seal bar seals and cuts on the front and back. Manageable from the touch screen to enable any operator to change format in an immediate and simple manner (recipe-based). Mechanical version or more automated with saved electronic movements. It can be equipped with different stacking or grouping systems (stacker, diverter, etc.). The bundler machine can package products in plastic, polystyrene, tissue, EPS, single or multipack.

High quality components, ISO certificated

High performance thanks to the motorised bar, to the integration of the automatic loading systems and the Siemens or Omron program logic. Available in intermittent or box motion version, up to 30 packs/min.

Tight and compact packaging without heat shrinking, obtainable thanks to the hot air top sealing system.

Motorized pusher.

Accessible cantilever structure with electric box on view.

The pre-cut (“window”) option can be added.

Stacker or multichannel as an optional for stacking or grouping products .
